

Airbag and Pyrotechnic Seat Belt Tensioner System

General

Pyrotechnic safety systems are installed as standard and consist of:

- Driver's airbag.
- Pyrotechnic seat belt tensioners.

The passenger's side of the compartment allows sufficient space for movement of the passenger in a front end collision.

The driver's airbag and the seat belt tensioners are deployed in the event of a front end collision.

Important:

The safety regulations regarding the handling and disposal of pyrotechnic units (airbag and seat belt tensioners) must be strictly observed.

• Service

The pyrotechnic safety system is checked by means of TECH 2.
