

## Door Window

The sides of the door window glass are equipped with plastic sliders that engage in L-section guides.

Manually-operated window regulators are installed in the doors as standard. Each sash window is raised and lowered by means of a scissor mechanism.

### • Service

The bottom part of each L-section guide is equipped with an adjusting screw to set the position of the door window against the seals in the door frame. Access to the adjusting screws is gained after removal of the door trim.
