

## Paint information on the vehicle identification plate

Agila, Corsa-B, Tigra, Corsa-C, Meriva, Astra-F, Astra-G, Zafira, Vectra-B, Vectra-C, Omega-B, Signum

In most production vehicles, the vehicle identification plate is located in the area of the door column on the right-hand side of the car. The identification plate is incorporated from production with a laser system on a durable self-adhesive film.

On vehicles from other productions the identification plate may still be of the conventional type, with the vehicle data stamped on the top front or in the wheel housing under the bonnet.

The information on paint quality and the paint number are in the bottom row.
