

## Paint Systems

Solid 1-coat paint applications

2-coat solid paint systems

2-coat metallic paint systems

2-coat mica effect paint systems

Owing to the introduction of the blending system, the paint systems are extended to include "blend-in painting" and "touching up". These systems are applied to achieve optimum colour-matching with solvent-based paint and preparation materials specifically for 2-coat paint applications.

The systems can also be used for water-based paints.
