

Step A – Observe service literature and Safety Measures

A1 – Observe service literature

A2 – Observe safety measures

The basic prerequisite is to protect the operator from dangers and health hazards.

It is the responsibility of the employer or supervisor to ensure a safe work environment.

The national guidelines and information from the trade association of the chemical industry must be observed to ensure safety in the workplace.

The following basic safety measures must be followed:

Protect eyes!

- Eye bath.
- Wear safety goggles.
- In case of eye contact, immediately rinse out any material with water.

Protect respiratory organs!

- Wear breathing mask.
- Work with materials in well-ventilated areas with extractor system.

Protect skin!

- Wear protective clothing, protective gloves.
- If skin comes into contact with materials, clean with plenty of water and a neutral soap.

Protect hearing!

- Wear earmuffs for sanding and sawing operations.

Note: For additional safety notices, refer to special brochure "Safety Regulations" KTA-2270/6 Edition 06/01.

A3 – Dangerous materials classification

The dangerous materials classification regulates the handling of materials. The designation is on the material container label.

Note: The documentation is subordinate to the national legislation.

A4 – Hazard Class

The hazard class regulates the storage of flammable liquids and, if applicable, is on the material container label.

Note: The documentation is subordinate to the national legislation.
