Complaint: Under certain circumstances while braking, the driver complains about a hard brake pedal

Cause:

Production:

Remedy:

The Opel Speedster/VX220 is equipped with an ABS system that ensures brake stabil with avoidance vehicle oversteering, by controlling the brake power distribution. This situation is dependent on reduction of the brake pressure at the rear wheels. This condition can be felt by the driver and could be interpreted as a hard brake

For drivers who mostly drive their vehicles at high speeds and probably use their vehicle on race circuits, it is possible to use the ABS System of the future Speedster/VX220 with a revised tuned version, available as of Autumn 2002.
